

MOVING NATURAL GAS SAFELY ACROSS B.C.

A SPECIAL SERIES ON LIQUEFIED NATURAL GAS

Pipelines have been transporting natural gas across Canada safely and efficiently since 1853.

58

years since B.C. natural gas was first transported by pipeline to the U.S. via Vancouver

6.2 million

number of Canadians who receive natural gas at home or work

56%

of all Canadian natural gas supply transported by pipeline to U.S. markets

Natural gas has been transported by pipeline across British Columbia safely and efficiently for more than 50 years. It is piped into homes and offices across the province and used for heating and cooking. New pipelines will be crucial to the development of B.C.'s LNG industry, but right from the start pipeline companies will consult with and engage First Nations, local communities and other stakeholders to ensure that they are aware of the project and understand what is involved.

The BC LNG Alliance is the voice of British Columbia's new LNG export industry. Our mission is to foster the growth of a safe, environmentally responsible and globally competitive LNG industry in British Columbia and Canada.
